

# profile sonics correctly set

To check the 8m speeds being low, we checked the physical serial numbers on the tower. They are:

Height (m)	S /N
8	733
7	720
5.5	537
4	740
3	739
1.5	732

These are exactly as recorded in the file sonics/sonic.configs.
