

# flr Mote check - restarts

10/16/13 ~1:55Z

logged into flr. id1 and id2 reporting, not id17. <cr> restarted id17 connection.

because flr 'hb' cron now runs every hour, set xr=7200 for 2hourly resets if no hb received.

rs 2 again and found id17 not coming in. played around a bit and then id2 also wasn't coming in. However, all 3 still responding to any command. 'reboot' command to all 3 motes. that looks better: all 3 messages coming in at once instead of individually (or not). let's see if any of this helps....
