

Network status 15 Feb

Josés Carlos and Palma today adjusted the PITCH of the ops center antenna, which immediately brought tse13 and rne06 online, and improved the connection to rne07. So, for the first time, we now have all links to the ne ridge in place and working. With these links up, we are also able to get to many of the sites in the valley and sw ridge – now 17 total stations. There are another 4 sites that should be on the network, but aren't connected. An additional 3 sites are on the network, but the data system won't connect. So...progress, but still some work to do.
