SODAR site off the net for several hours

SODAR site went offline around 3z. The 20170526 SODAR data was not transferred by then, so the SODAR data look very far behind. I visited the site and cycled power on the TP-Link, that restored the Internet connection, and then I needed to update the allowed hosts on eol-rt-data to allow the tunnel to connect. Connection restored at 2017-05-27,14:36.
