

Daily status 30 May 2017

4 good soundings today at 00, 06, 12, and 18 UTC. I had an issue with the 06 sounding that the GPS data from the sonde didn't show up, but when I selected bad sonde and then started again in Gauss with the same sonde it worked fine. The same thing happened to Kate at the 12 UTC sounding, so she used a second sonde. Her first (unused) sonde worked for me so I used it for the 18 UTC sounding. I couldn't recondition the T sensor since the battery was already attached but everything else was fine.

Tomorrow Kate is going to inventory the rest of the sondes in the ISS container.

Weather today and tomorrow is warming up with increasing winds from W/NW.
