Modeling carbon exchange

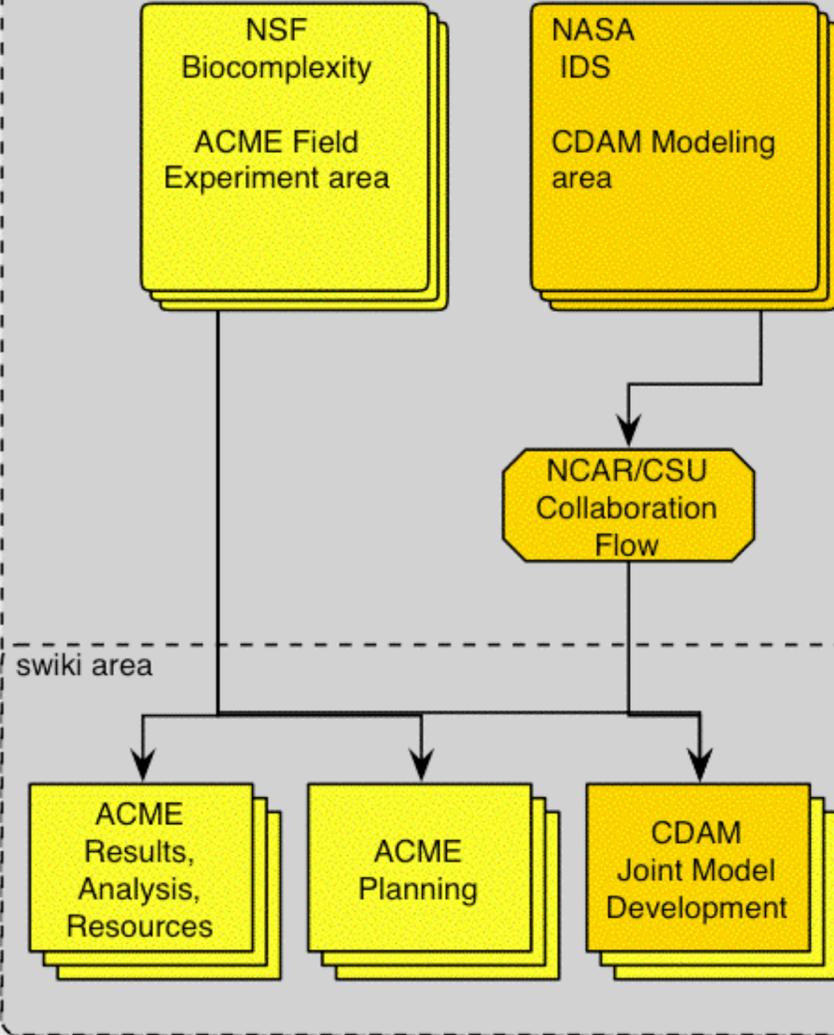

Half or more of US GPP is in mountainous regions

Carbon data assimilation

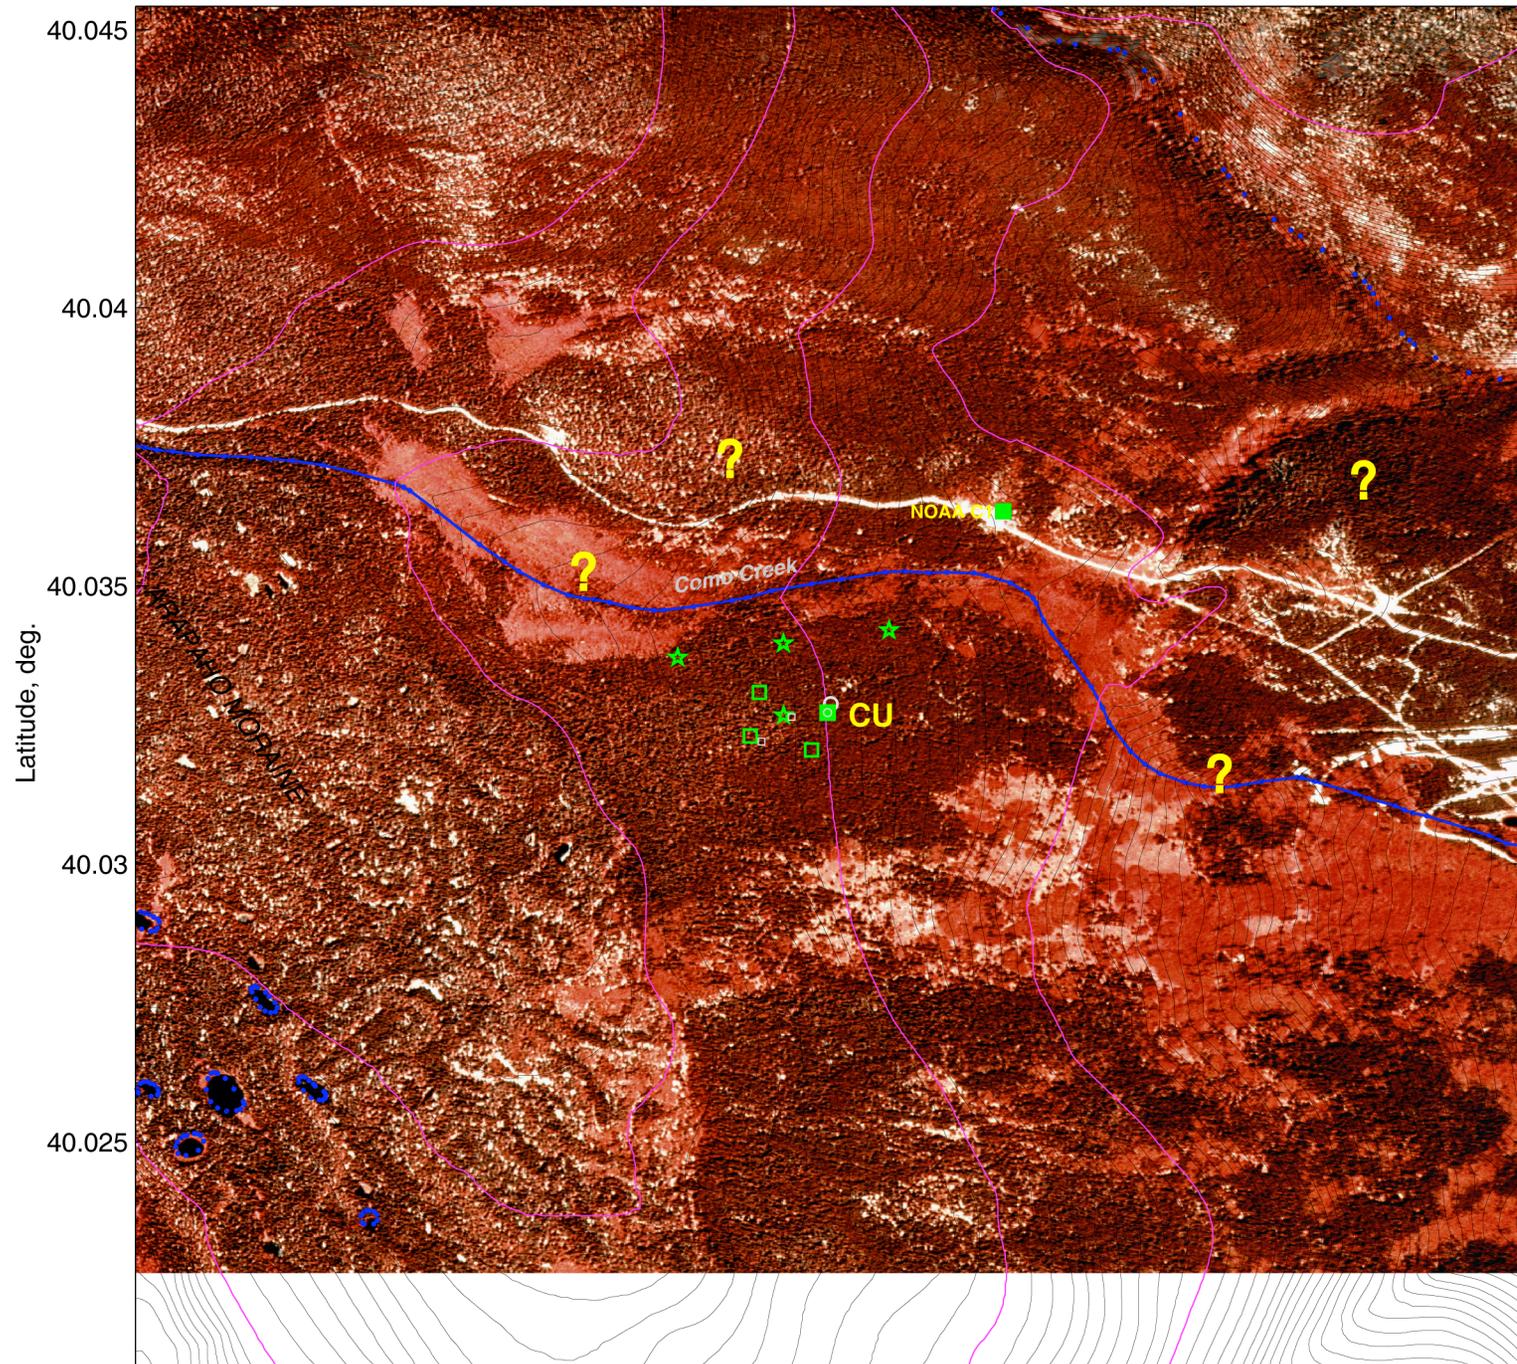

Integration of field, aircraft, remote sensing and modeling studies to estimate terrestrial carbon fluxes

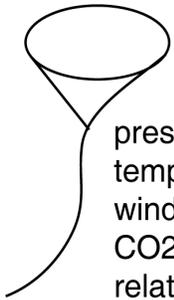

2.8 x 2.8 km Box

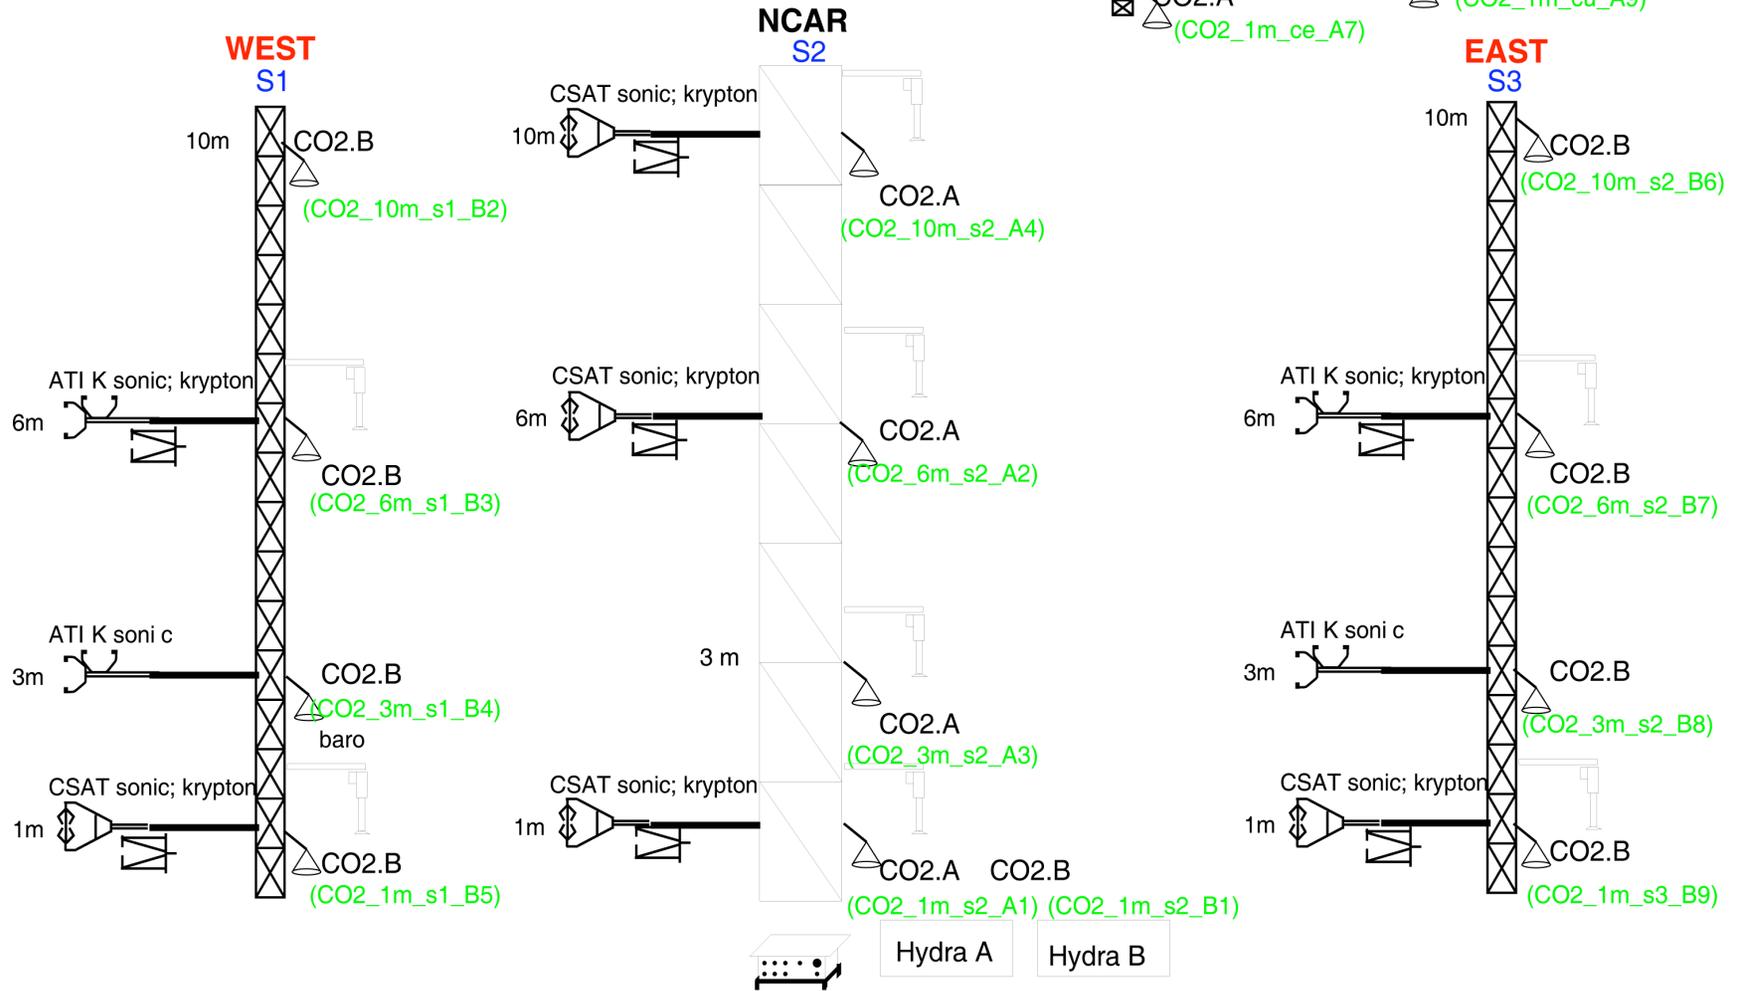

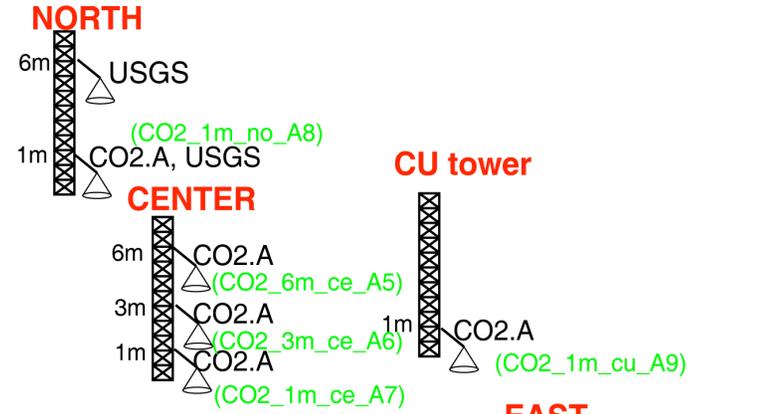

tethered balloon

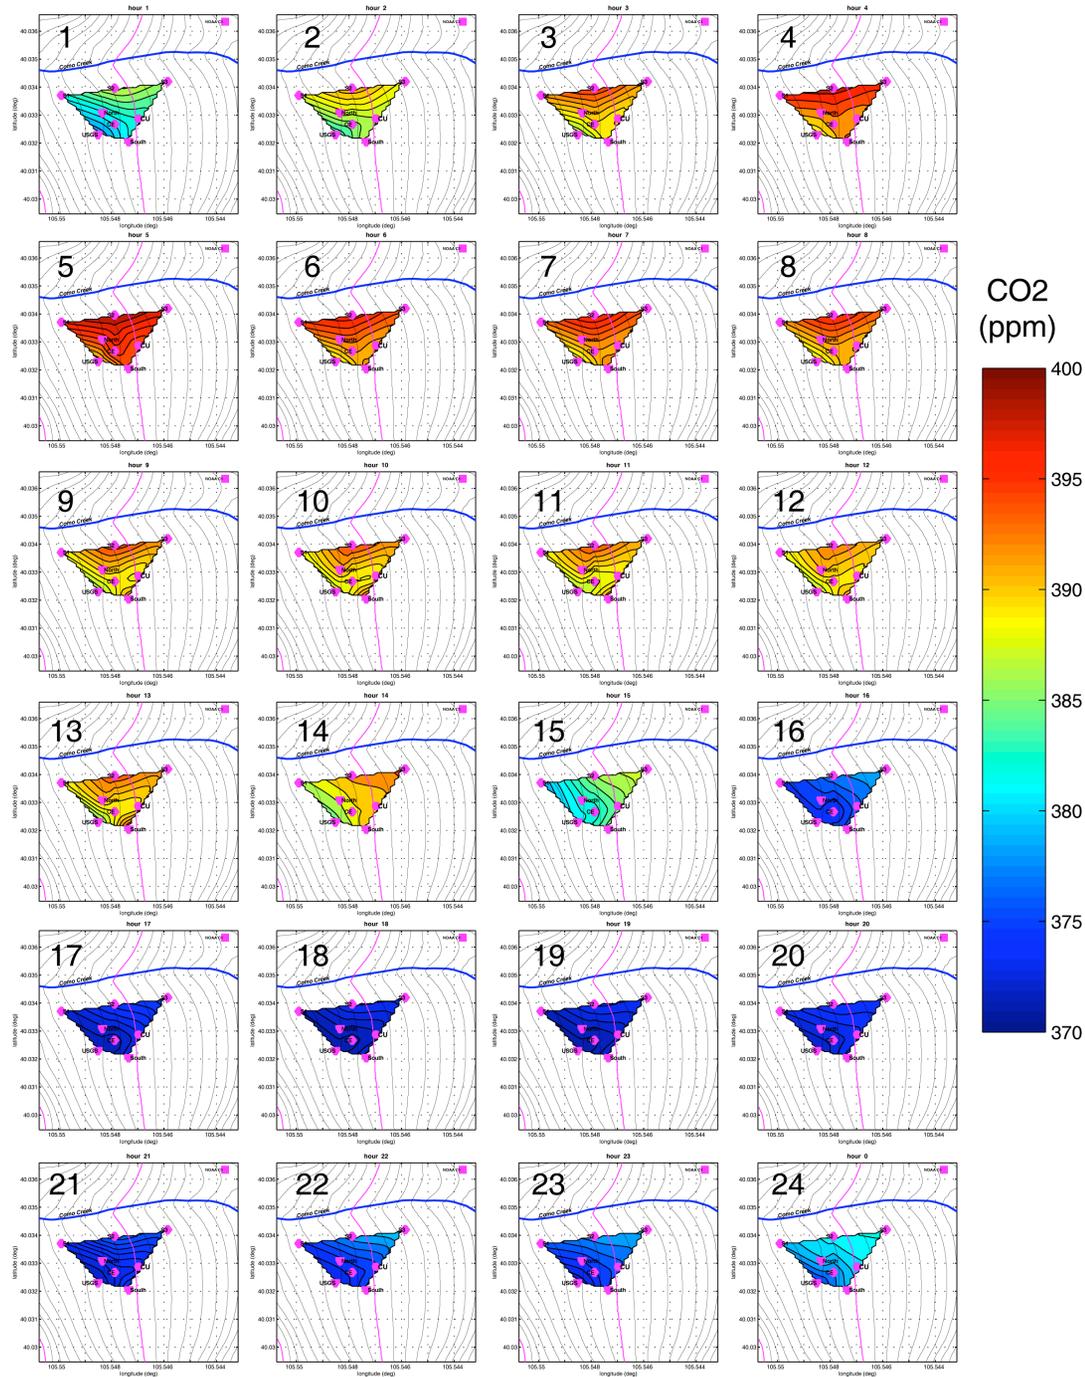

pressure
 temperature
 wind speed and direction
 CO2
 relative humidity

NCAR Sensor Layout

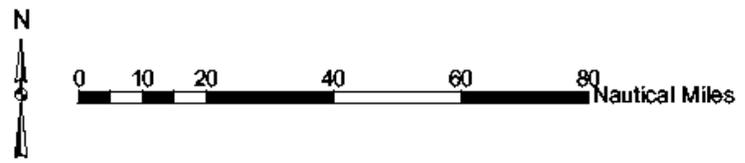

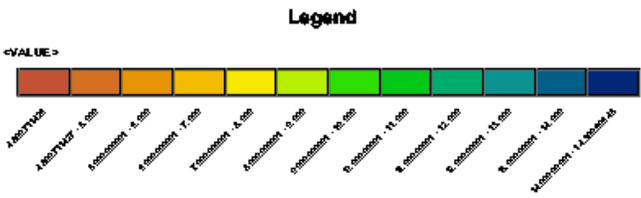

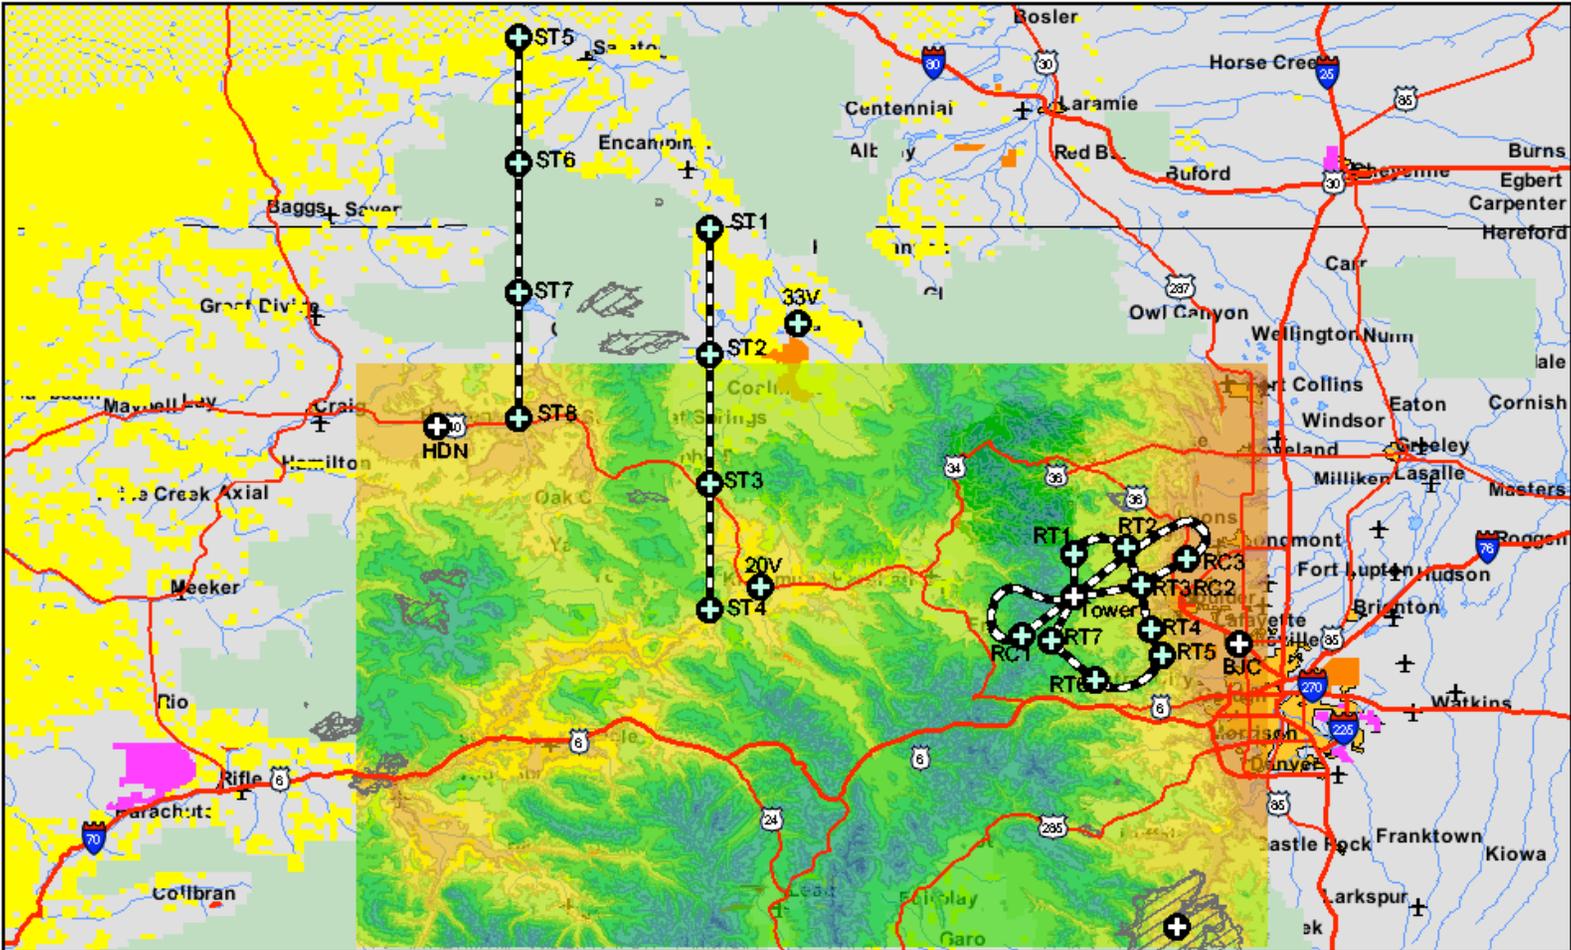

Diurnal variations of spatial variations of CO2 (UTC)

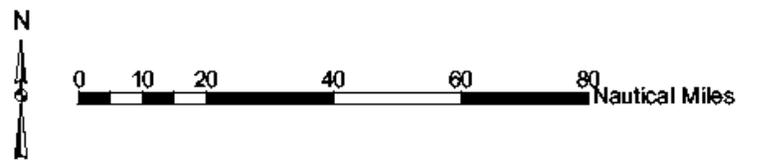

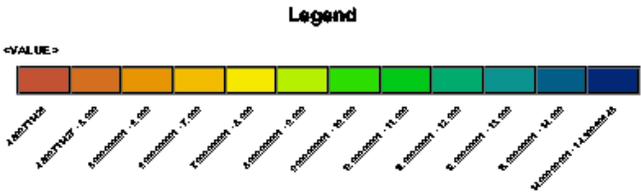

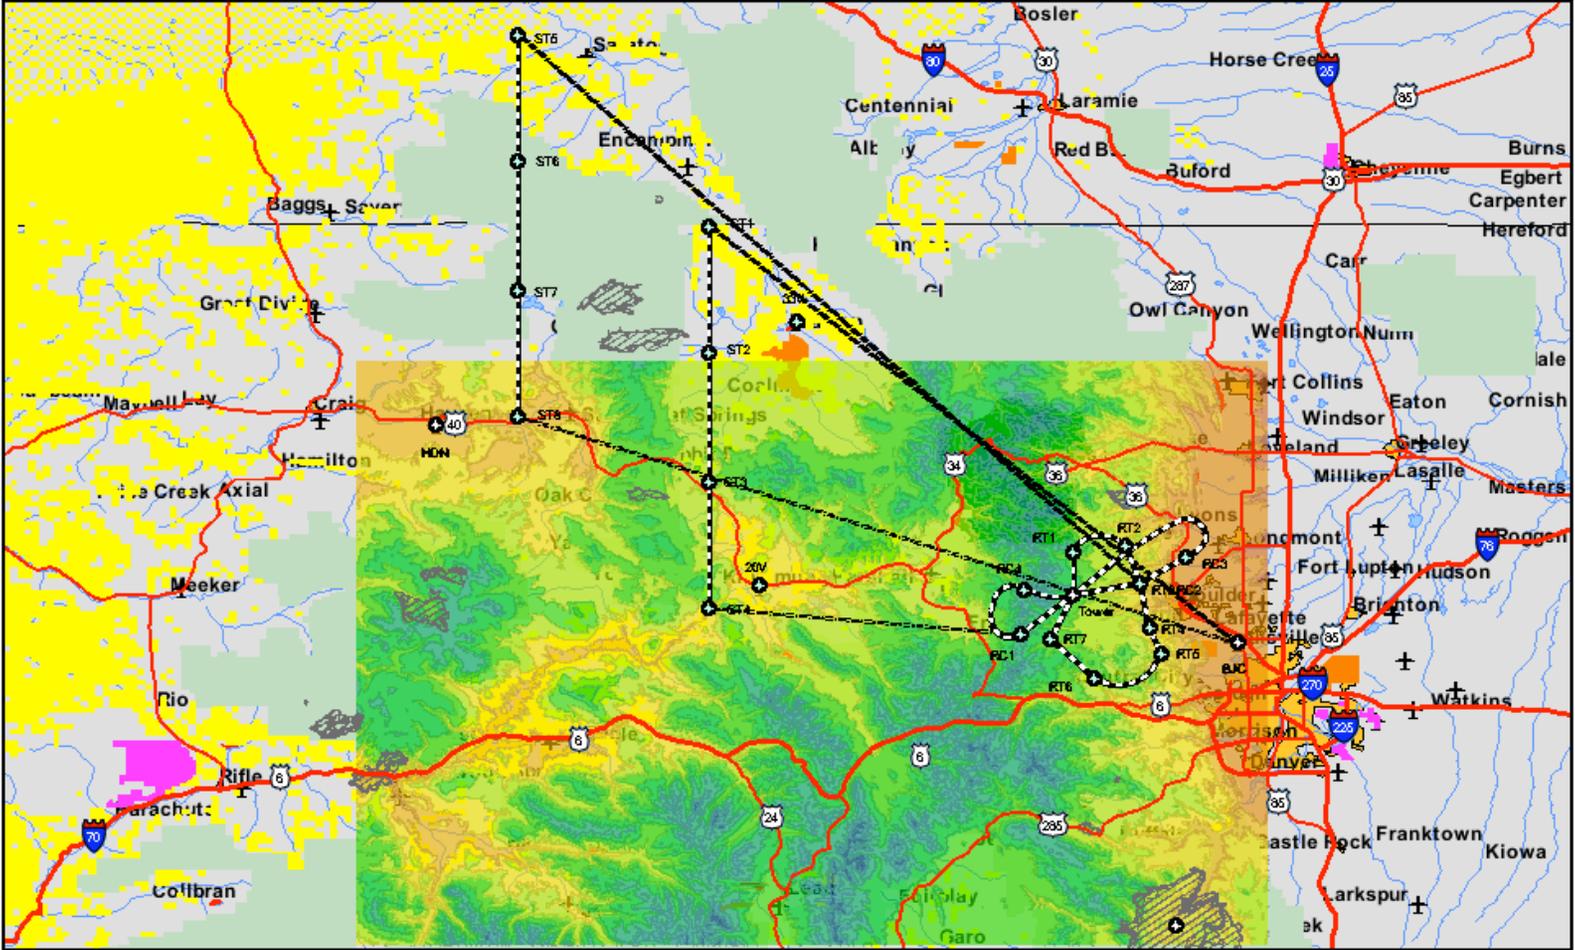

Airborne Carbon in the Mountains Experiment

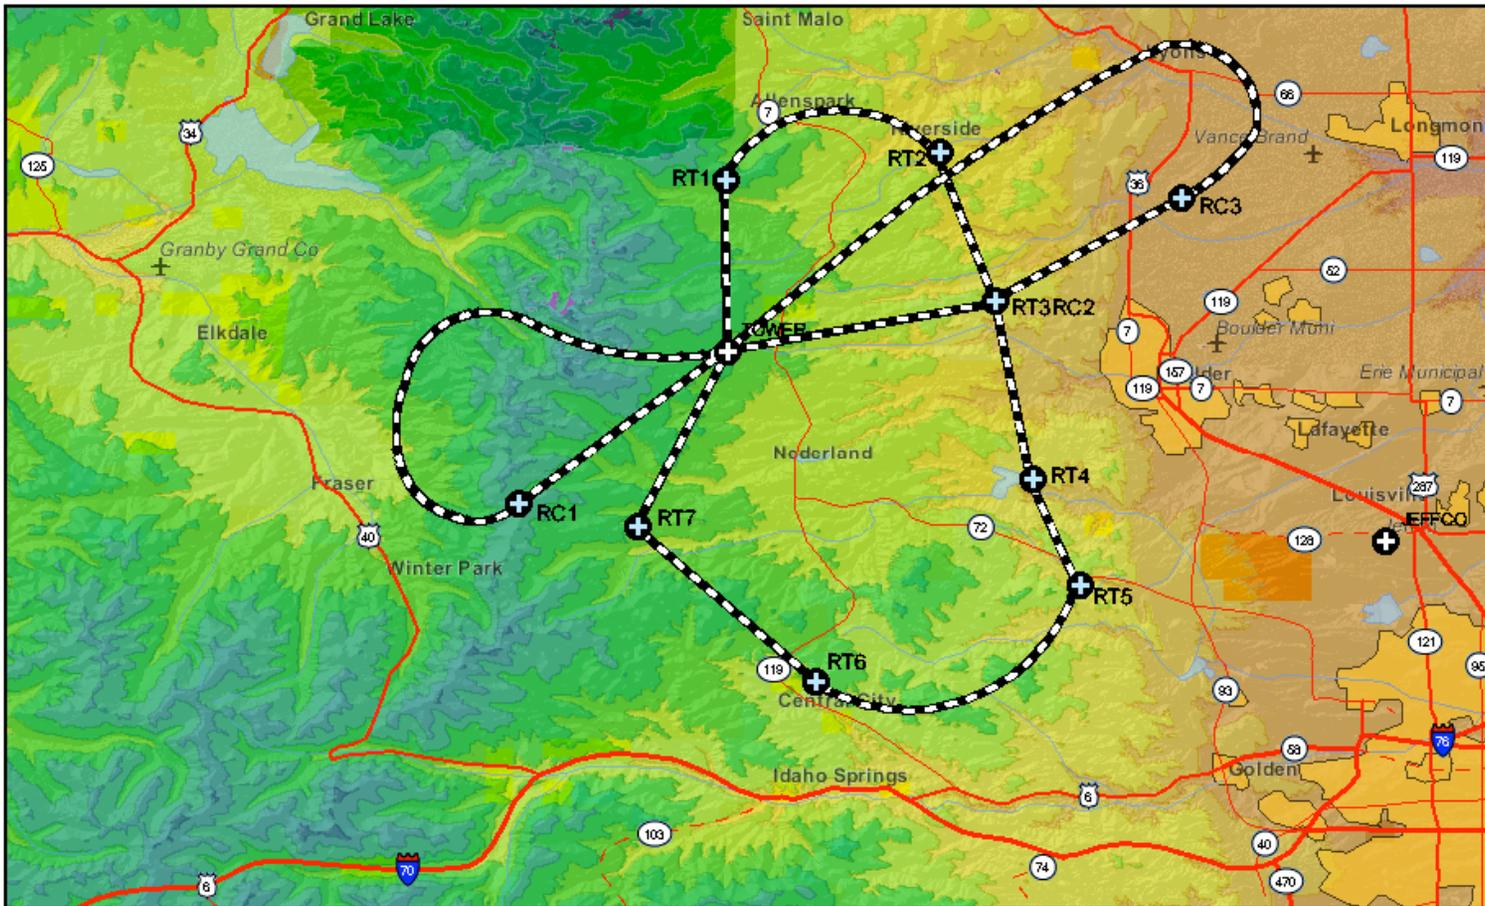

DRAFT: ACME Morning Flight

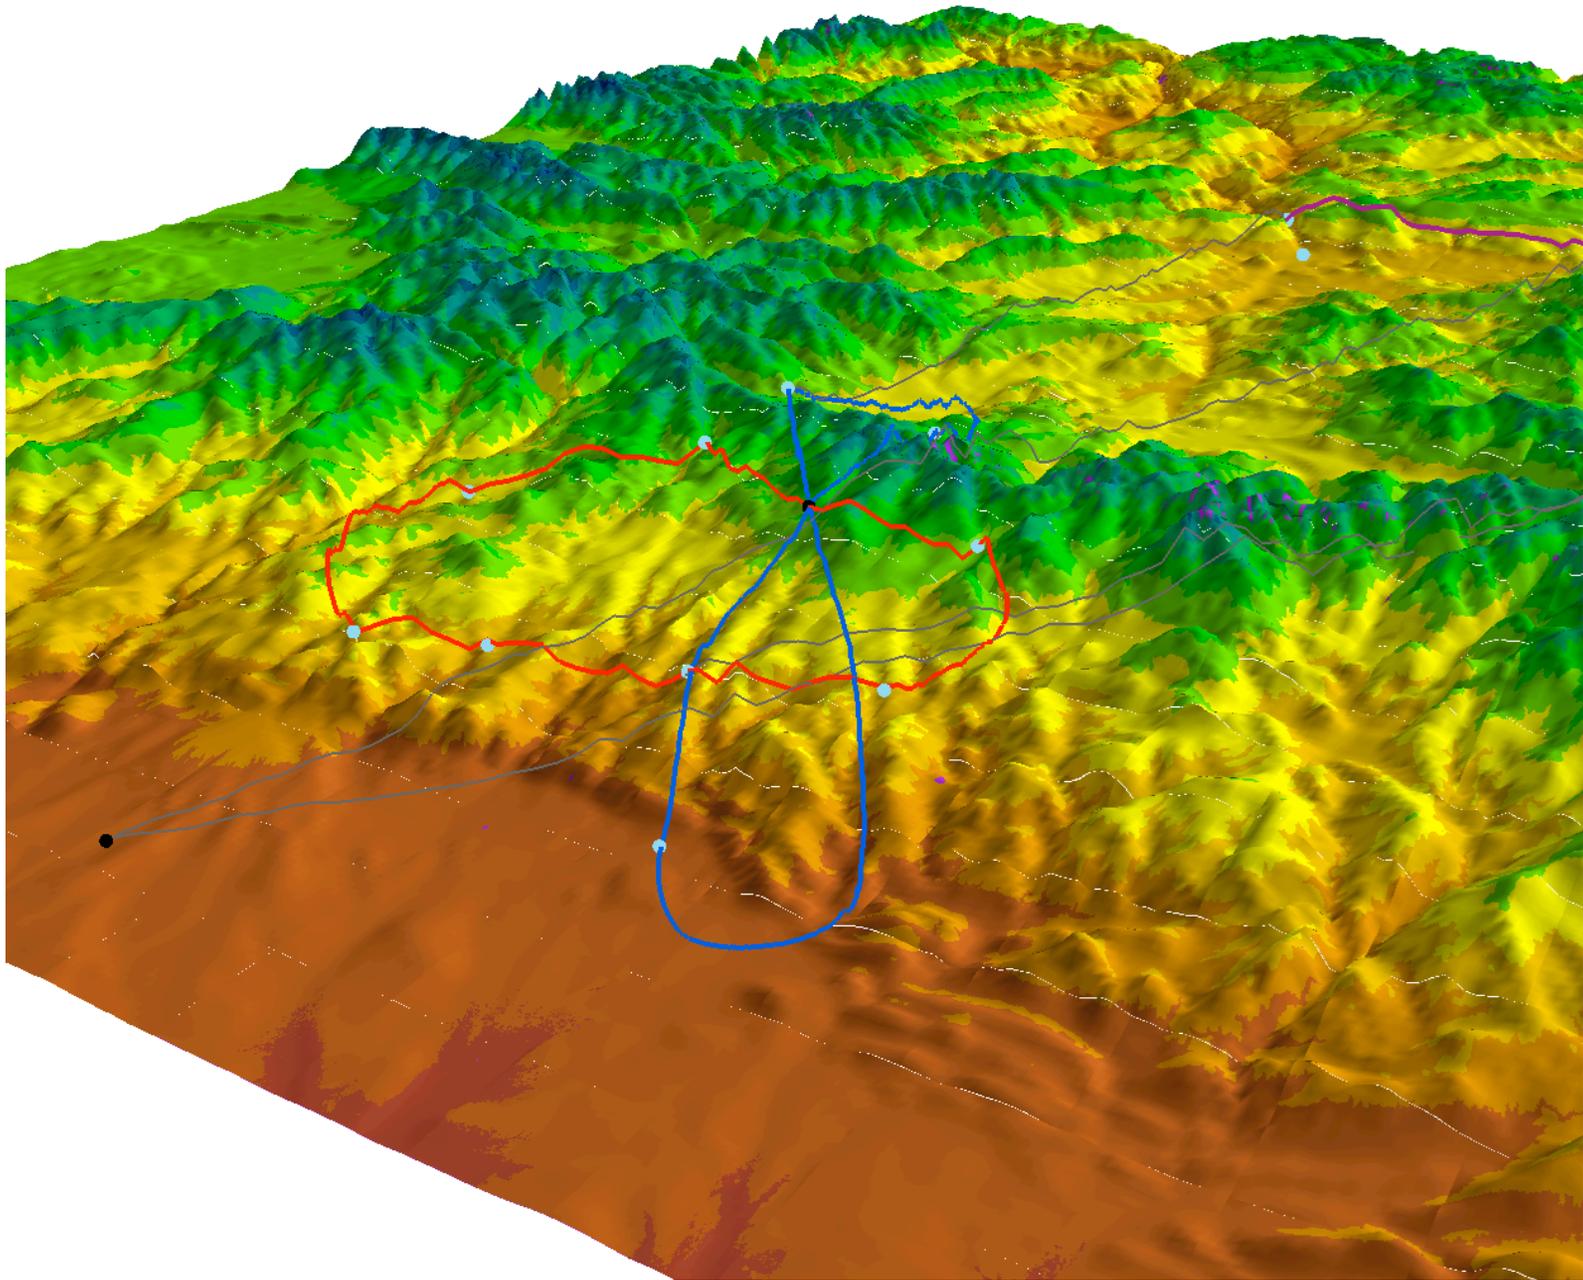

DRAFT: ACME Morning Flight

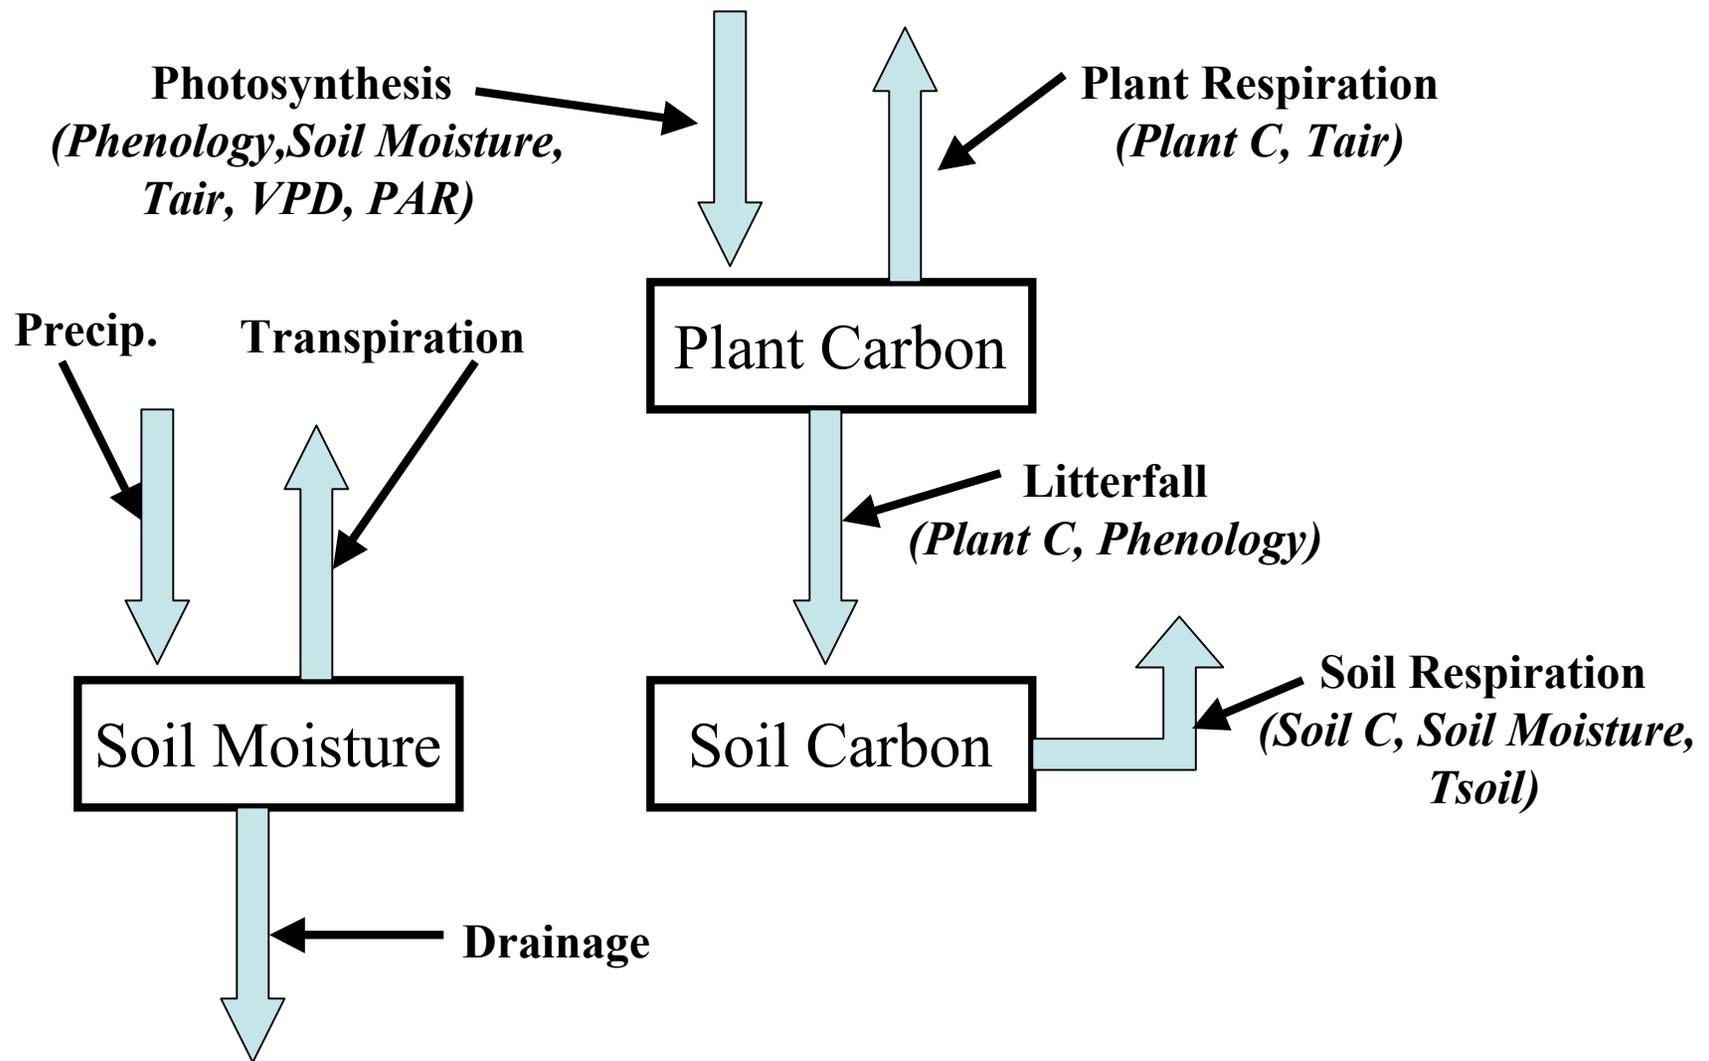

DRAFT: ACME Racetrack and Rollercoaster Flight Tracks

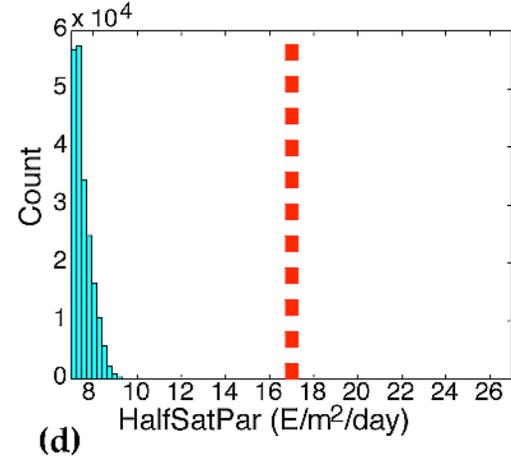

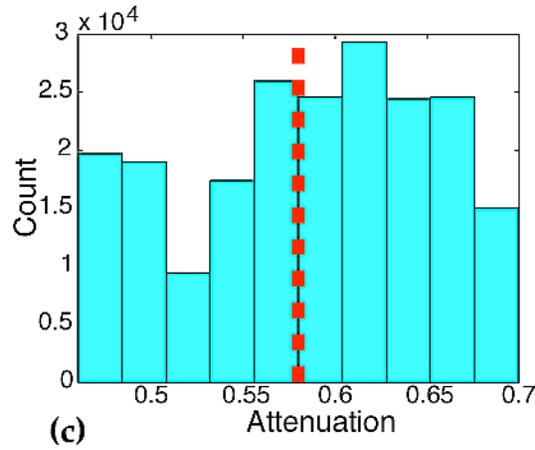

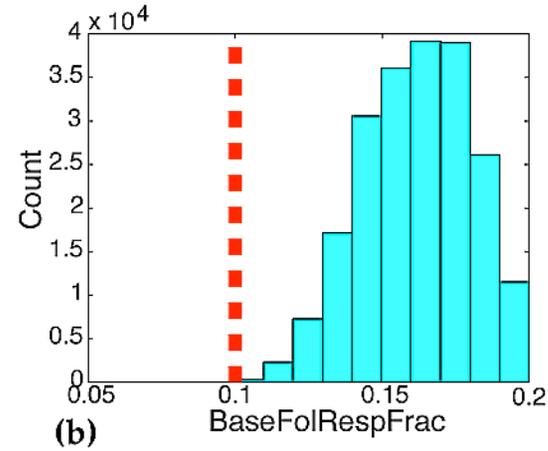

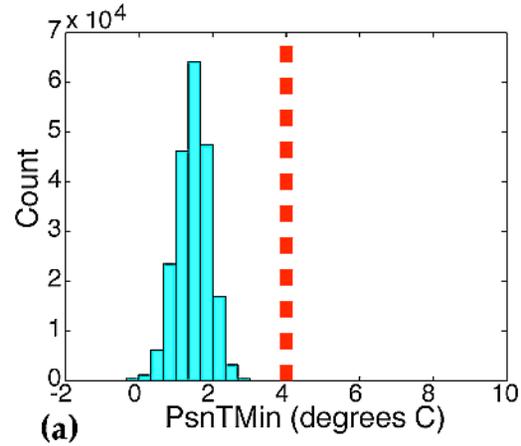

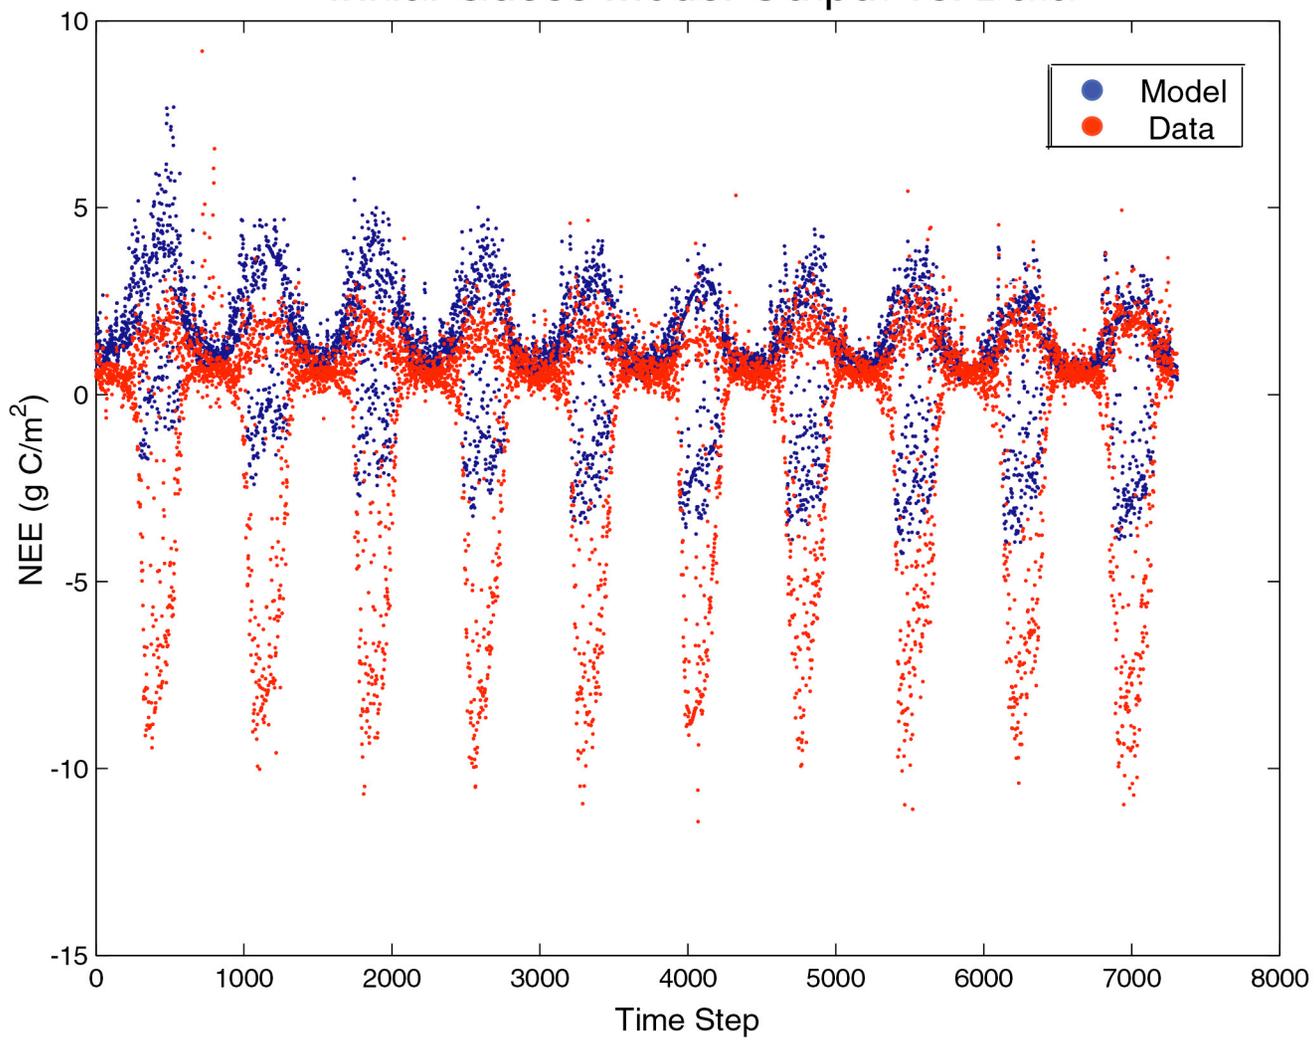

SPACENET Model Structure

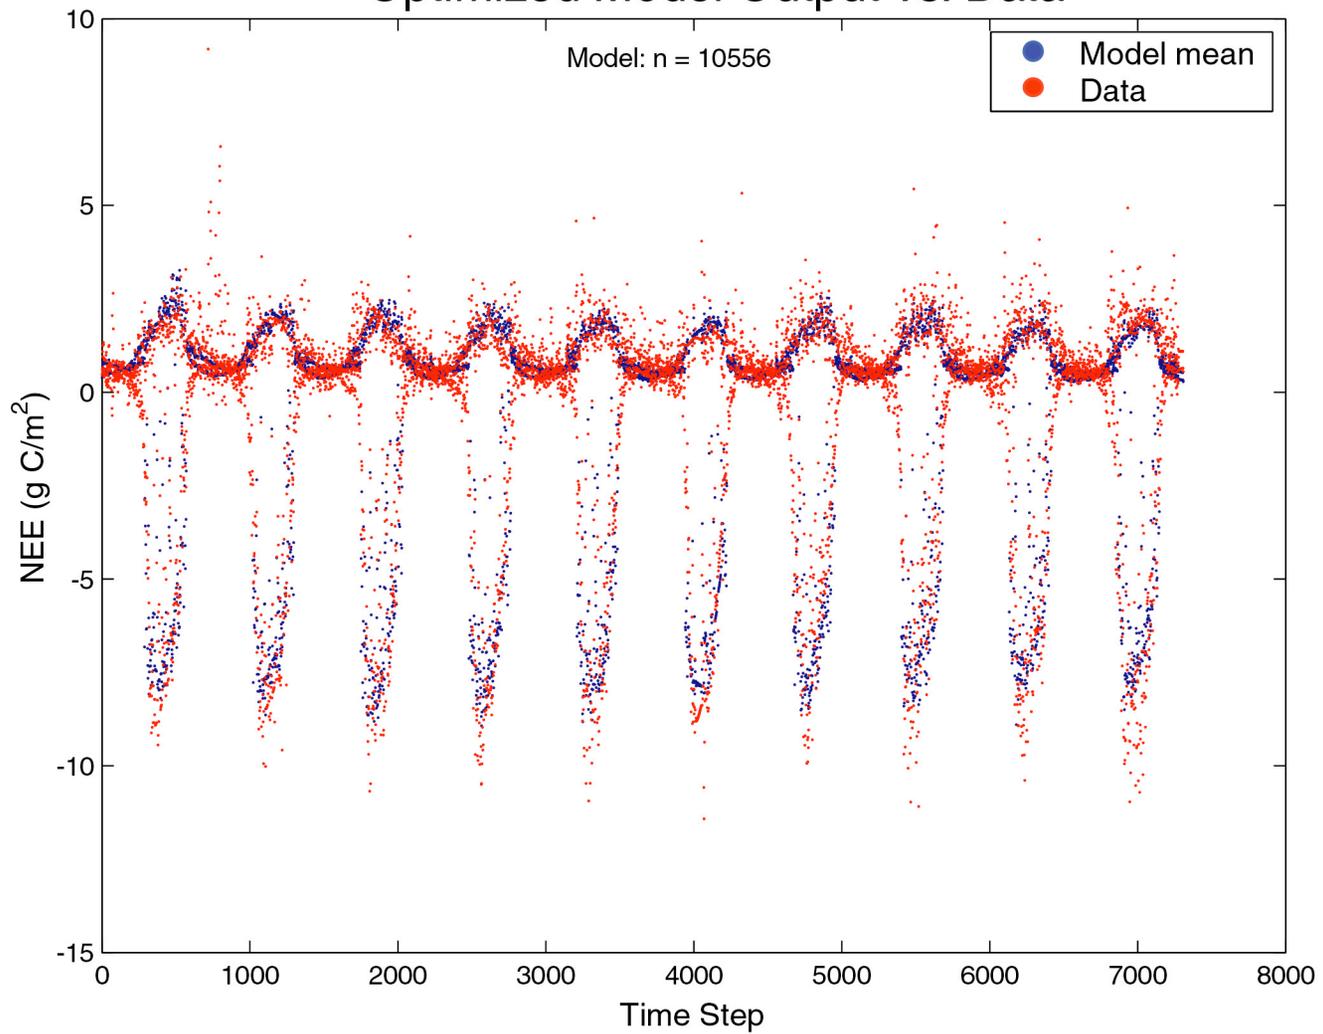

1-D results - Harvard Forest

Initial Guess Model Output vs. Data

Optimized Model Output vs. Data

Model vs. Data: Unoptimized & Optimized Parameters

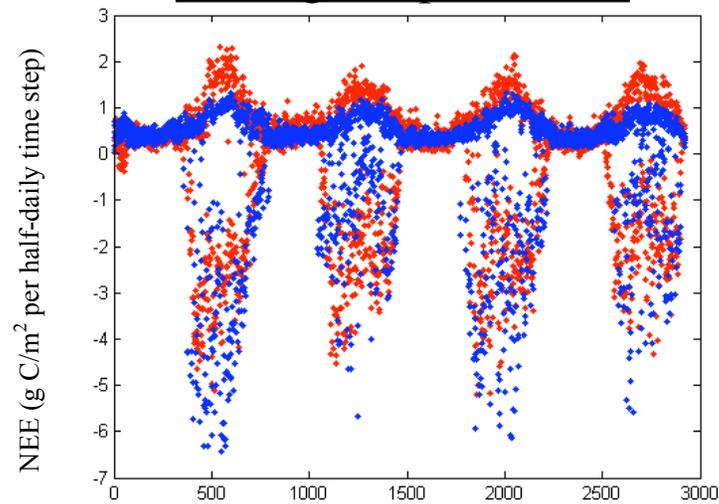

Blue: Model

Red: Data

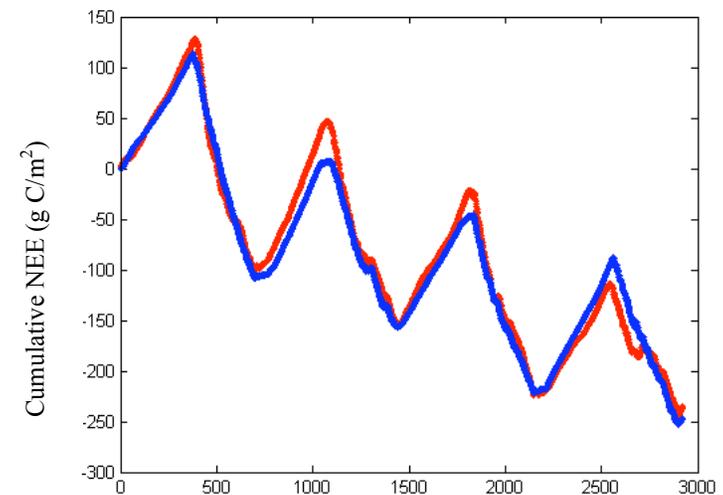

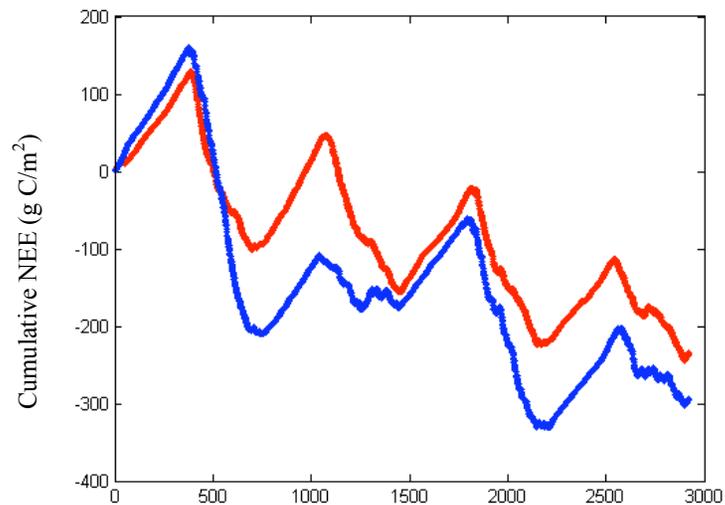

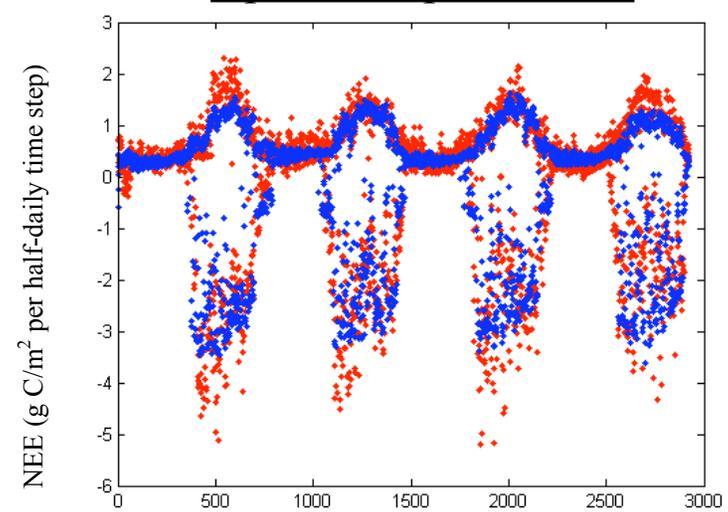

Dates: 11/1/98 – 10/31/02

Each point represents one half-daily time step

Initial guess parameters

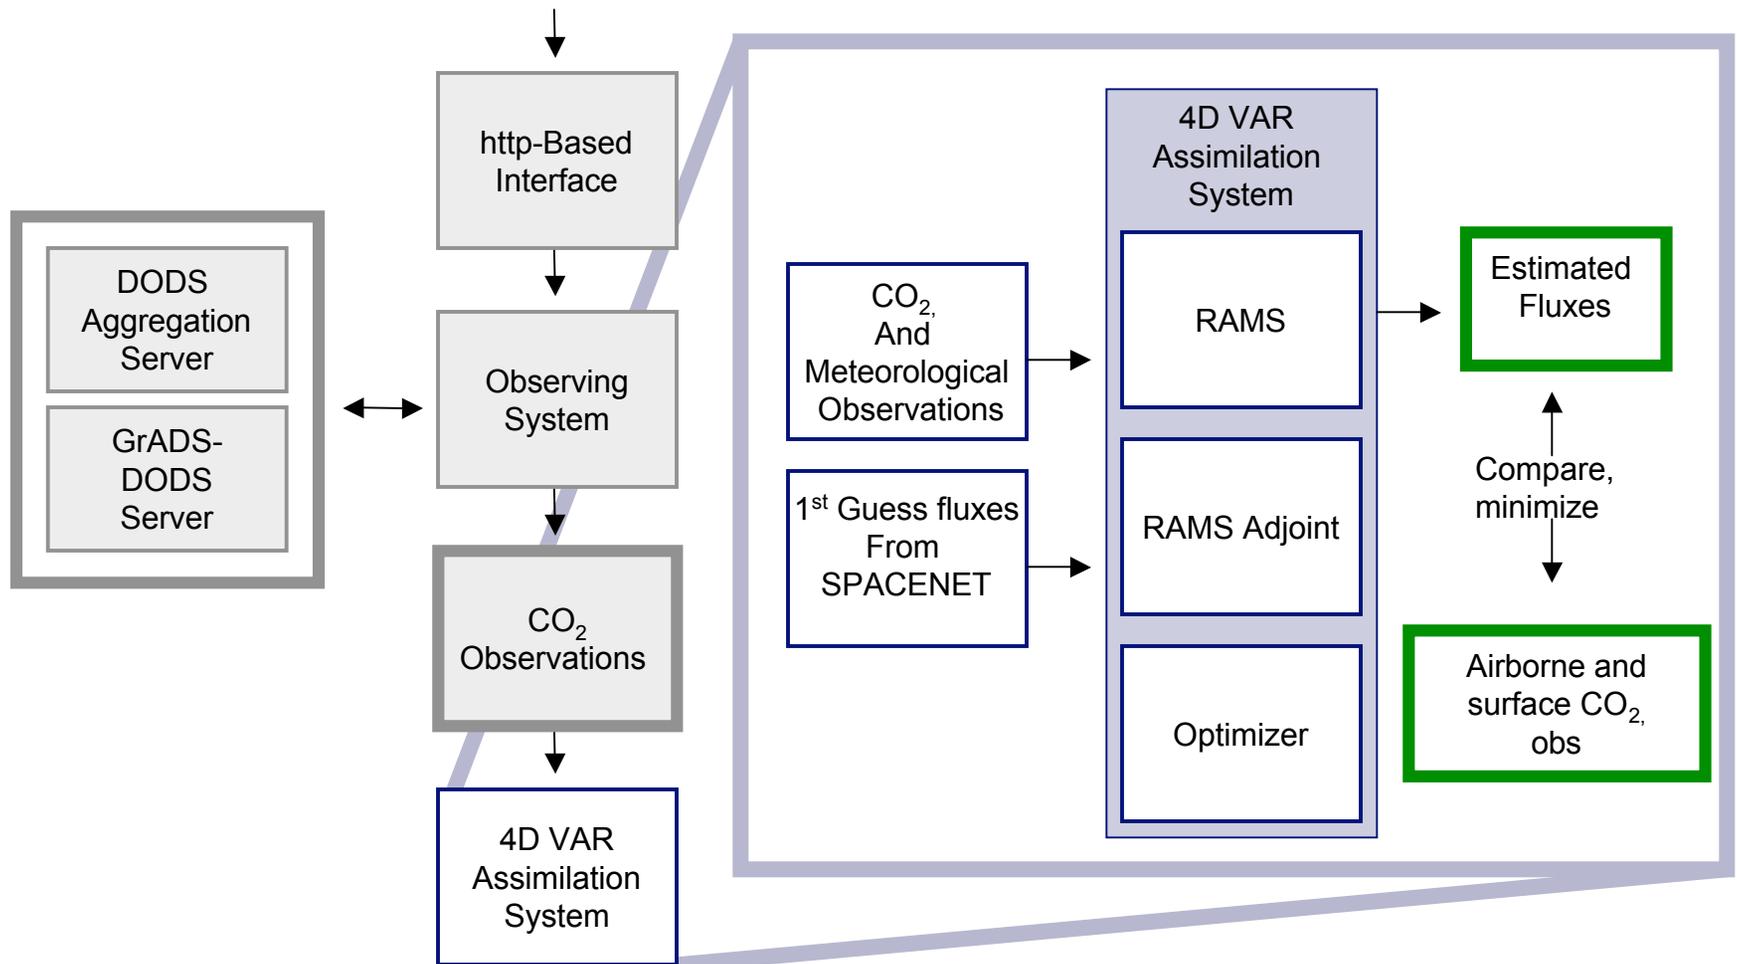

Optimized parameters

Regional carbon data assimilation system based on RAMS atmosphere model

Carbon Data-Model Assimilation (C-DAS)

<http://dataportal.ucar.edu/CDAS/>

Looking to the future - a regional BGS Front Range study

- Carbon issues
- Water issues
- Land use change
- Urbanization/ urban - rural interface
- Air quality
- A “regional” lab for method, instrument and sensor web development
- An opportunity for education and outreach (extend the IDEAS concept)

Timing: ACME-CME 2 in 2006-7 as a building block?

NACP Mountain Intensive

NEON
