

## Travis-CI currently on OOPS and UFO repositories

Code added to repositories:

### **.travis.yml :**

- sets travis-ci environment
- builds and runs Docker image using the latest Docker image on DockerHub
- builds repo inside the container
- runs ctests inside the container and generates reports needed for CodeCov
- uploads reports to CodeCov

### **Dockerfile :**

- builds tools that are not already on jcsda/docker:latest
- customizes the container

### **default-mca-params.conf:**

- helps solve the problem with running mpi on docker container and oversubscription setup

### **.codcov.yml**
