EWOK (Experiments and Workflow Orchestration Kit)
R2D2 (Research Repository for Data and Diagnostics)

Today

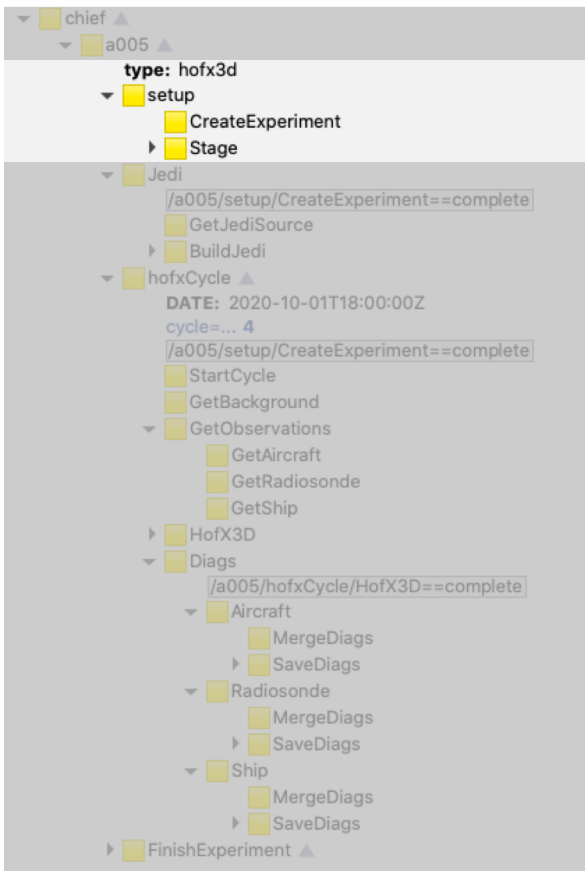

- Workflow: ecflow
- How ewok attempts to leverage generic experiments
- How r2d2 abstracts meteorological data access
- How to parameterize experiments:
 - Setting up experiments
 - Specifying branches and tags to build a bundle
 - Machine specific information

ECFlow and EWOK

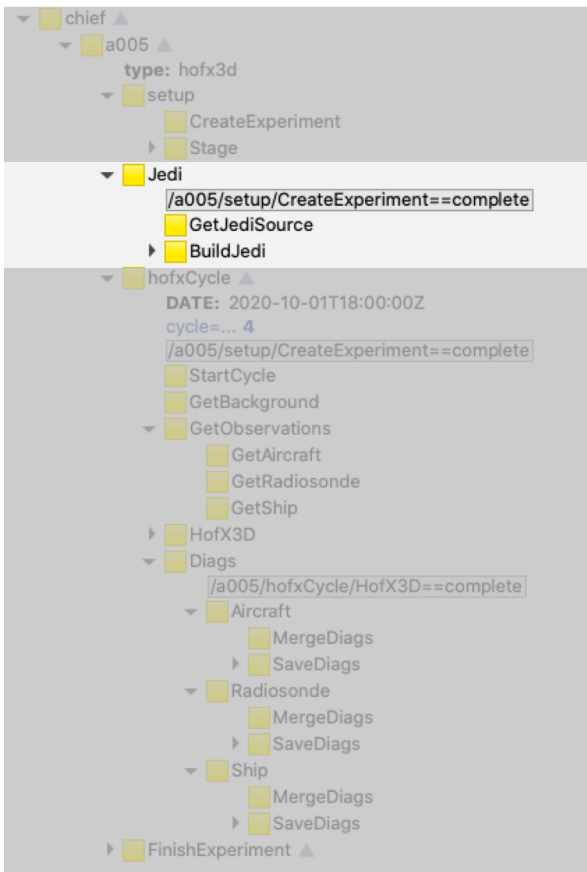

Live demo 😊

Prepare the suite

- Create directories
- Copy static model files (vertical levels, geometry, field sets, etc..)

Prepare the code

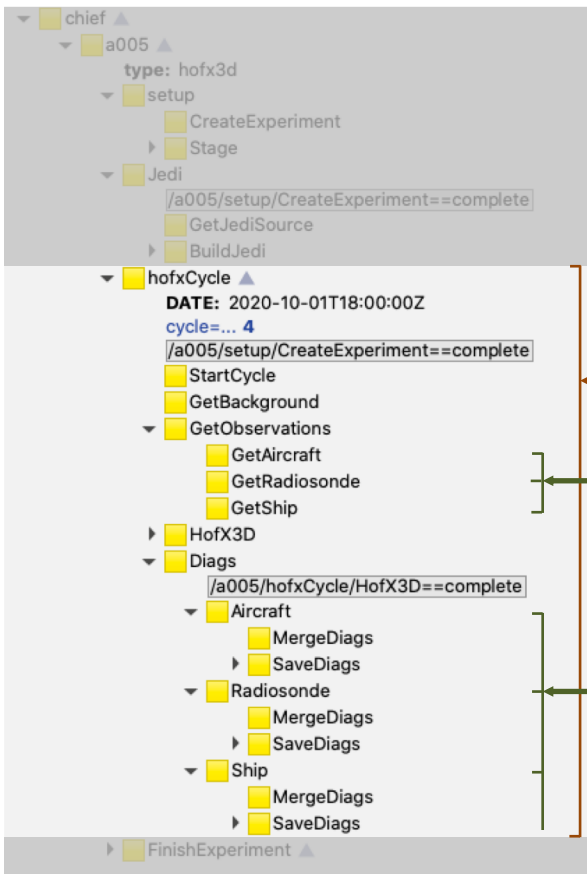

- Pull git repositories, branches, tags, commits
- Build the bundle (ecbuild, make)

Cycle

- Serial and parallel scheduling

serial schedule

parallel schedule

parallel schedule

Get model input data

```
▼ chief ▲
  ▼ a005 ▲
    type: hofx3d
    ▼ setup
      CreateExperiment
      ▶ Stage
    ▼ Jedi
      /a005/setup/CreateExperiment==complete
      GetJediSource
      ▶ BuildJedi
    ▼ hofxCycle ▲
      DATE: 2020-10-01T18:00:00Z
      cycle=... 4
      /a005/setup/CreateExperiment==complete
      StartCycle
      GetBackground
      ▼ GetObservations
        GetAircraft
        GetRadiosonde
        GetShip
      ▶ HofX3D
      ▼ Diags
        /a005/hofxCycle/HofX3D==complete
        ▼ Aircraft
          MergeDiags
          ▶ SaveDiags
        ▼ Radiosonde
          MergeDiags
          ▶ SaveDiags
        ▼ Ship
          MergeDiags
          ▶ SaveDiags
      ▶ FinishExperiment ▲
```

- Get or produce the background
- Get observations

- When invoking the binary, ewok build the yaml necessary to run the model using templates sitting in an ewok directory in the oops repository.
- The templates refer to yaml files residing in the chosen model repository, for example, in fv3-jedi/ewok/gfs or fv3-jedi/ewok/geos.

Complete

```

└─ chief ▲
  └─ a005 ▲
    type: hofx3d
    └─ setup
      CreateExperiment
      └─ Stage
        Jedi
        /a005/setup/CreateExperiment==complete
        GetJediSource
        └─ BuildJedi

            HofX3D
            Diags
            /a005/hofxCycle/HofX3D==complete
            └─ Aircraft
              MergeDiags
              └─ SaveDiags
                └─ Radiosonde
                  MergeDiags
                  └─ SaveDiags
                    └─ Ship
                      MergeDiags
                      └─ SaveDiags
FinishExperiment ▲

```

- Save the experiment configuration, including git information to be able to reproduce the experiment.
- Cleanup files, experiment.

Building block

- Prepare the suite
- Prepare the code
- Cycle
 - Get input data
 - Preprocess
 - Run model
 - Postprocess and save output data

Those are similar for most types of experiments. This enables us to have a small set of generics suites.

Task Genericity

- Calling the model binaries with the right configuration files. Templates are used
- Moving data around. In order to deal with data in a generic way, R2D2 provides a high level interface. Meteorological data (fields, observations) are described with a set of key value pairs mapping to a unique piece of data (a file).

R2D2 - fetch

```
fetch(  
  type='ob',  
  provider='ncdiag',  
  experiment='oper',  
  obs_type=['aircraft', 'radiosonde'],  
  date=date_sequence('2020-10-01T00:00:00Z', '2020-10-01T18:00:00Z' 'PT6H'),  
  time_window='PT6H'
```

R2D2 - fetch

```
fetch(  
    type='fc',  
    model='gfs',  
    experiment='oper',  
    resolution='c768',  
    step='PT6H',  
    date=date_sequence('2020-10-01T00:00:00Z', '2020-10-01T18:00:00Z' 'PT6H'),  
    file_type=['fv_core.res', 'fv_tracer.res'],  
    tile=[1, 2, 3, 4, 5, 6],  
    target_file='$ (type) . $ (step) . $ (date) . nc '  
)
```

Today
