Contributing Resources to the UCARConnect Catalog

The UCARConnect catalog is made up of information about high-quality online educational resources created by the UCAR community. Information comes from the databases and organizational knowledge of the various UCAR divisions and is organized into metadata records. This wiki is intended to explain this process so that you will know how to submit resource information to UCARConnect.

This wiki is intended to provide information on how to create and share metadata with UCARConnect. It complements, and often redirects to, the Developer APIs wiki.

For DLESE, see the documentation pages about DLESE metadata, collections, and cataloging.

The wiki is organized into sections, please see the Child Pages below.
