Transferring Files

⚠ Note: Frost has been moved out from behind the CryptoCard firewall, as of 10/22/2006. You may scp directly to either **frost.ucar.edu** or **frost.ncar. teragrid.org** which will still use your CryptoCard for authentication.

It is easiest to use scp or sftp on Frost to transfer files between Frost and an outside machine. For example:

```
fr0102ge /home/voran> scp -r remotemachine.somedomain.edu:/home/voran/mydir .
```

If the firewall on the external machine will not allow you to ssh directly to it from Frost, then these links will get you started transferring files through roy to frost:

- https://www.scd.ucar.edu/docs/access/internal/inbound.html
- http://www.scd.ucar.edu/info/UserForum/presentations/ghosh.ppt
