issues

A working list of issues I'm seeing from cockpit -- I'll edit this as they are dealt with...

All sonics: diagbits and ldiag change multiple times per frame. Does this indicate sonic problems?

A11: Vmote.c is low, as if there was no charging.

A11: Tsoil.1.9cm.g at bottom of plot?

A19: TRH 2m was dead. Responded to tio 3 0/1. Not good.

A1 (only): U,V scale only positive

C20: Baro dead. Does not respond to eio 10 0/1

M21: No Picarro (of course)
