

# Daily Status Sun 2012-Oct-21

## WEATHER & OPS

On arrival weather was sunny and comfortable temperatures(~15C). Very calm winds (compared to last week) and traffic on Hwy 85 light. Can hear prairie dogs singing to the sodars.

Steve S. and Chris G. have taken over for ops these next couple of weeks. We have gotten the new Flux system and plugged everything in with nothing happening. We found out that we need to shut off wifi and tell it to talk ethernet all the time and it all worked. We brought the theodolites down to see if the Main Tower is plumb from tensioning the guy-wires in the winds last week. Half a tube to the West and eighth of a tube to the South. So it wasn't too far off, but we did do some tweeking and it is now a eighth of a tube out to the South. New tensions were took and logged.

## SENSOR STATUS AND ISSUES

No issues were found with any of the towers or sensors.

## TO DO

Will repair TRHs tomorrow and finishing potting TRH wagon wheels. While doing the potting we will both shoot boom angles. Trying to get issues that require two people since we will try a one person Ops starting Tuesday.
