

Daily Status Monday 10-22-12

Weather:

Light winds during the night. A few clouds this morning with calm conditions. High humidity

Status:

TRH at 2m on A17 went down last night. Used TIO command to get it going again.

The cockpit for Lambdasoil shows bad data however cockpit A11rs shows good data. A data_dump confirms the data is coming in. Killed lambdasoil cockpit and started another one. Data coming in.

Also noticed A18 0.5m TRH went out. We tried to use the DIO lines but nothing happened. Went out to tower and rebooted mote. Nothing. Noticed the cable to the TRH was getting pulled out. Fixed tightness of cable and all good.

To Do:

Finish potting TRH units (Done in the AM). Shoot boom angles and clean Kryptons (Done in the PM).
