

Daily Status Weds 24-Oct-2012

Weather:

Cloudy and cold today. Very slight winds. Rain came in later in the day and noticed station 6 sonic become unhappy, the first of all the stations now.

Status & Ops:

All stations reporting. Gully is saving data. Cockpit was updated and all plots are working. If anyone is interested in my set-up you can load ChrisCockpit. Be aware that it is Halloween colors. Don't be scared.

To Dos:

Yet some more...clean the base trailer. Will take Amperage readings for all branches of AC power. This is a task Kurt wanted me to do.

I have parked the four wheeler under the base trailer for shelter from rain and snow. I organized some of Cristoph's PVC and things under the front part of the trailer so I could park and lock the ATV up. This may not be a permanent spot for parking the ATV but for now it will work.
