

Daily Status Monday 10-29-12

Weather

Partly cloudy, light winds last night, temperatures in the single digits.

Status

Overall things looking very good. The Vdsm6 will be down until we replace the mote. Qsoilc is still intermittent. The 10m krypton will require a tower climb. This will take place possible tomorrow when another person is up here.

Update

Qsoilc: tried moving the DIN connection of the bad Qsoil but it did not make a difference.
