

Daily Status Nov. 23 2012

Daily status

We have entered the remote monitoring stage of SCP due to the Thanksgiving Holiday period.

John and Steve S. will monitor the data remotely until Monday, Nov. 26 when John will go to the site.

Everything looking good this morning. I did notice there is no T.baro from the new nano baro sites; #5, #10, #21.

This is expected since the sensor is not putting out that parameter.

M21 down: Noticed after entering this log that m21 went down. I was able to ping to the station. The data collection process was not running. An 'aup' got it going.

AFTERNOON (16:30): All stations running. All sensors look good. Very light winds, <2m/s.
