## STATUS

Things look good. Wind speed throughout the night stayed below 5 m/s.

John may visit the site today.

Afternoon (13:30) : John payed a visit to the site. Said all was well with winds pushing 10m/s.

~14:10-14:20 5m,10m Kryptons cleaned, JM. The voltages didn't improve and if anything the 10m went down. I cleaned twice with q-tips/h2o and wiped off as well but perhaps there was something on the cotton or perhaps i touched the cotton with my glove but i don't think so. The concentration went up on the 10m and is tracking that of the 5m since. Otherwise things still looking good.

Local store pocketec at 55% full.

Evening (20:00): Winds topped off at about 12 - 14 m/s. They are now down around 2 m/s. All stations reporting ok.
