Status

morning (7:30): All stations reporting. Temperatures are dropping and the humidity is up. Overcast and maybe some fog in area in am. Winds were up since yesterday afternoon and still 2-5ms this morning shifting to e/ne. Not a good last night for science.

Remainder of day, overcast continued, winds remained low in afternoon and temps through the day were cooler hovering around freezing+/- . All stations remain up.

Boom angles: Yet another set was shot. Data scope was calibrated using camera tripod before hand, it reported "good = 8". Didn't complete all shots: getting dark while doing main. Some of my Handar reading were 'off' because of sighting the wrong angle, so they should be repeated. jm

On-Site: John.
