

# Daily Status Tues. 27-Nov-12

## Status:

All stations reporting in am

On-Site: John

Weather: Clearing, fairly calm overnight. Roughly 40 cirrus cover in am. Chilly, temps dropped to -8 to -10 since roughly 10-11pm last night. Winds fairly light roughly <2 from west. No evidence of fog, dew, but very light frost with humidity rather high, 80%ish.

Gully: Pocketec local storage swapped. Out #11 with data from 11/21 through 26th. In #8

Spare DSM gray box (unlabeled) returning to Boulder for misc. testing support there.

## Sensors:

Sensors: Looking good. A few diag hits on ec150 sonic "low signal" but data ok.

Radiometers, Licors Cleaned: 8:55-9:05 MST, with methanol. Frost was on uplooking Rsw but didn't appear to be any on Rlw. Rsw.both desiccant was shot: replaced 9:40-9:50MST.
