

# 4G modem

Gordon, June 1

I tried to repair the 4G modem, whose tiny RF connector had broken off from the PCB. Split open the plastic case and removed the loose connector, hoping that it would receive an acceptable signal with the internal antenna.

This morning, put the 4G back on the router at the top of the tower, but the reported signal levels are bad: 0%, RSSI:-125(dBm). Time to order another.
