

Site work

From about 1030-1200, Steve and I were at the tower:

- Take in 3 links on #5 NW guy to allow us to tension. Adjusted top 3 guy sets to straighten tower. See guy wire entry that Steve is updating.
- Shoot boom angle: 263.6 degrees by me (looking into boom). (North set to zero in Datascope.) I wouldn't be surprised if this is a degree off...
- Took soil samples at about 1200 and immediately drove to lab for processing. I'll update the soil logbook entry as well.
