

# AP24 down for test

9:25 - The internet link to the fish hatchery has been acting up so we are doing a test to try and isolate the cause. Since Gordon had success with lowering the power on the AP24 we decided to shut it down.

UPDATE, 10:30 : We went through a process of shutting down each interant and checking Paul's link.

There was no improvement. We then shut down the SODAR and again not success. Paul will call his provider and we will start getting things back on the air.

UPDATE, 10:45 : Everything back on the air
