

# Moved base mote for ground sensors

9:30 - 10:00 Moved the base mote from about 3m up the tower down to ground level to see if that improves the reception from the rad and soil motes.

15:00 Moved it again, since soil.b seemed to have a lot of missed data (gaps of 40--120s). Now seems okay, but still in 10.0/0.2 sec bursts.
