

20m Sonic Down

20m Sonic down from: 6Jul13,~13:30 - 7Jul13....

The 20m sonic died during the continuous rain event yesterday.

Site visit 7Jul ~10-11am: Fortunately a branch did not get it. Power cycling by 'eio 12 0/1' or plugging/unplugging on lower didn't solve it. The eio power cycle and power itself are ok. Briefly swapped 13m sonic on port 9 to port 12 to confirm the emerald is ok; it is. At one point when plugging the 20m cable in I did see it try to startup with intermittent bursts of garbage coming through. Appears to be a cable or connector got wet. Need to wait for 2nd person to climb.

More later,
