

Tower Net and Power outage - no data loss

15Jul13

From ~12:15 - 15:30 we had the power down at the tower site, and thus the network link as well. NO DATA LOSS: Local data storage remained up on the dsm's and data transfer should happen as normal tonight.

This was done as the ACD / Tram trailer were loaded and hauled out. Kerry Slaven showed up to help and they brought their Penski so we took advantage and had the ACD eqpt. loaded for shipment early. While doing so, we then pulled our big transformers and put them in the Tram trailer in addition to the ACD overflow in preparation for shipping.

Power was re-wired to the small transformers and the network comms came back normally.
