# Flash local storage at near

Noticed that the local usb flash drive was not mounted at "near".

/var/log/isfs/kernel contains the following:

```
Oct  1 21:37:53 near kernel: usb 1-2: reset full speed USB device using isp116x-hcd and address 2
Oct  1 21:38:31 near last message repeated 4 times
Oct  1 21:38:31 near kernel: sd 1:0:0:0: Device offlined - not ready after error recovery
Oct  1 21:38:31 near kernel: sd 1:0:0:0: [sdb] Unhandled error code
Oct  1 21:38:31 near kernel: sd 1:0:0:0: [sdb] Result: hostbyte=0x05 driverbyte=0x00
Oct  1 21:38:31 near kernel: sd 1:0:0:0: [sdb] CDB: cdb[0]=0x2a: 2a 00 00 28 3b e1 00 00 18 00
Oct  1 21:38:31 near kernel: end_request: I/O error, dev sdb, sector 2636769
Oct  1 21:38:31 near kernel: Buffer I/O error on device sdb1, logical block 329596
...
```

On Oct 2, at 22:41 UTC, Chris unplugged/replugged the flash drive. It is a flash drive not a pocketec. After an automatic fsck, the file system was recovered.

We'll watch this flash, and replace it if necessary.
