

Trailer power brownout caused AP24 to go down

Gordon, Oct 4 04

Typically when the base trailer air conditioner kicks on, the lights brown out and an alarm beeps once on the UPS (APc Back-UPS ES 350).

This afternoon, a brownout caused the ap24 WIFI at the tower to reboot.

Currently these devices are on the UPS:

- /media/backup external UPS drive
- AP24
- 8 port ethernet switch
- netgear router (connected to Hughes modem)
- Hughes satellite modem

May want to get a better UPS. The battery in this one is probably shot.
