

# Update to Solar panel loan to German group

I installed the spare solar panel array and charge controller at the German Scintillometer on the south rim today. We did not utilize the cooler for battery containment, we used one of their existing boxes. The equipment that belongs to ISFS at this location is as follows:

1 set of solar panels on a frame

1 charge controller, mounted inside the battery box that belongs to the Germans

4 rebar stakes at the feet of the solar panels

1 solar panel connector cable

Thanks,

Tim
