Daily Summary Oct 15. 2013 - Morning

At the ISS trailer

Visual inspection of site good: All RASS speakers working, cables seem in tact, tower guy lines good, fan working

449: operating, dashboard good (green lights and spectra counts updating), amp power @ 0.151 mW

Nagios:

** **metcraxii/profiler_latency_lidar/dbs/rtd** ** CRITICAL

** **metcraxii/profiler_latency_lidar/los/rtd** ** CRITICAL

Also red plags pertaining to the png files from the lidar not being updated

ZEB Plots:

okay

Web site plots

ISS1 site plots up to date

ISS2/GAUS site plots up to date except maybe the sodar. Will check again and check the site

WindCube:

plots are updating as viewed through TeamViewer

At ISS1/GAUS site

Visited sodar site - sodar running. There was an error message (warning?) on the monitor in the solar trailer stating that another computer was using the IP address. Batteries in the trailer charged to 87%

Nagios flags for ISS2/GAUS all green

Site inspection good
