P.sw down

Gordon pointed out to us that P.sw started dying at 12:40 today, and stopped reporting at 14:25. We're guessing that this is power related, but won't be able to do anything until tomorrow. Note that we get no response to:

rs SW-p::hci1

If we did, we could have tried "r" to restart. (This works with the other Vaisala barometers.)
