

kh2o flr glitch

We've seen these before, but a spike in kh2oV.3m.flr is between 15:00:43 - 15:01:15 today. I'm calling these bugs, but I don't quite believe this explanation. If you want stranger ideas, ask Steve Semmer.

P.S. A better explanation is a drop of rain, though none was noticed at the base.
