

Metcrax Daily Update 10-27-13

Tis a wonderful day by the big hole in the ground in Arizona. The sun is shining and the sky is clear. Breeze is picking up possible strong winds being forecast. 18: All platforms appear to be running fine. Just finished with IOP #7. Very likely to be the last of the project. Chances for light rain in the next couple of days make that the opinion currently.

449 power is at .144 mW.

Did not time but Rass at 18:10z did not run for 5 minutes. 18:25z ran the full 5 minutes. It was also the on the half hour yesterday that went the full time. 18:40 also went for 5 mins

At approx 1845 restart rass full time. Ran for about 5 minutes and stopped. Did not restart until I did a "restart all" in the dashboard. Stopped again after approx 4 minutes. Left for 2 minutes then it restarted right on the hour mark [19:00] ran for 45 seconds and shut off again. Restarted by its self after 5 minutes. Off after 4 minutes. On after 1 minute. Off again after 10 minutes at approx 19:23. started up at 19:25. off 19:27. Started 19:30. Ran for 15 minutes before I shut it down.

I stopped it at 19:45 and did a "stop all" and restarted system in "RIM_only" mode.
