

Daily status 29 October

10/29/13

Summary:

- Partial tear-down starting today
- Still breezy -- 15m/s winds

Actions past 24 hours:

- Continued Qsoil.base plot testing

To dos:

- Tear-down of near/far rad/soil

Sensor status (abbreviated):

QCtables/cockpit show all signals coming in.

P: noticed that NNE deviates from others in the crater -- presumably due to the strong winds

SPN1: Delta-T has suggested some tests, but won't have time to pursue.

Rlw.in: warm event last night at all sites -- must have been a low cloud

kh2o.flr: sharp lower kh2oV event happening right now <possibly a bit of rain, but hard to believe as I overlook the crater>
