

Daily Update 10-29-13

Yesterday profiler went down.

This morning found that power amp was down. Cycled power on it and rebooted 449 computer . appears to be working now.

Restarted Dashboard before rebooting systems. and received an error message about pentak card not at address.

Power .146 mW.

Today is overcast windy and cool. Yesterday was also very windy.

All sky camera and ceilometer at the PAM Base have been shutdown and packed. ISS Display Manager and Ceilometer computers have also been removed.
