Use Confluence to take notes during your meetings

Create a new meeting notes page using this template. Keep track of who attended, what has been discussed during the meeting and what needs to be acted upon.

Alan reviewed the status of vaporgui 3.0

[overview slides](#) were presented.

We proposed the following work items

- Update the doxygen for the 3.0 classes (it does not work properly). Include in the doxygen the items that need work.
- Provide a diagram indicating the interactions between the high-level classes, e.g. params and renderers
- Tag the tree for each week's status
- Decide how to handle "dirty flags"

Alan will provide a code review when the existing classes have been organized and tidied up.

Task List
