## **Global Handle System**

All resources in NSDL are assigned a unique, global, persistent identifier registered through the Handle System. The Handle System provides a means for resolving NSDL identifiers to their resident URL at NSDL using a DOI resolution service such as http://dx.doi.org/2200/20120201095822279T.

NSDL identifiers have a handle prefix of 2200, for example 2200/20120201095822279T.
