2014-05-14 Meeting Notes

Date

14 May 2014

Attendees

- John Clyne, Alan, Scott, Miles

Agenda

Review Action Items

Notes

Alan has implemented 3 new params classes to support session mgt. These are posing challenges for undo/redo, which he is currently working on. After completing GUI cleanup (action item #4) Alan feels it will be time to do design/code review. Expects the effort will take another couple of weeks, but cautions that he'll need to get his sciparcs student spun up next week

John has nearly completed WASP implementation, sans support for missing data. Missing data might be better addressed at the VDC level. John will check in the code in the next day or two for review at next meeting.

Alan indicated "vis features" can't be supported until OpenGL text rendering is addressed. Discussion of the FTGL text library that Scott has been experimenting should happen before proceeding with vis features support.

Action Items

item	who
Check in WASP code	John
review WASP code and discuss for next meeting	Alan, Scott
