

ehs data turned off

We had to recover the DSM and batteries for use in PECAN, so I removed these from ehs from about 1018-1038 today. The rest of the station is still in place, but we no longer are collecting data.

bao and the tower sensors are still up, and currently scheduled to start being removed 1 June. (Actually, I don't know if this extension to 1 June has officially been approved, but I am assuming that this will be the case.)
