

Muddy trip at low tide

Kate and I went to 1,5,8 and 15.

At 1: removed TP01 to send back to Boulder. This had not been connected to the mote.

At 5: shot azimuths of the 2D and 3D soncis

At 8: shot azimuths

At 15: Shot azimuths, and removed the TP01 (also had not been connected), at 1:56. A cable fell from the mote when fiddling there. I plugged it back in and pressed the I2C rescan button. Looks like things are working.
