Daily Log Entry 10-25-2016

Clear, cool, breezy. Winds prevailed from the NW

To do:

- Reshoot boom angles at site 8 and 15 where we used tripod for stabilizing. We think tripod could be affecting the compass. (must be done at low tide, so this has to wait.
- Replace T/RH sensor at site 13.

Ongoing:

 Watching main tower wdir data and forecasts to determine appropriate conditions to have wind turbine turned off (at the request of the PI). She's looking for ENE winds between 40-80deg greater than 5m/s

T/RH: 42m TRH reporting warmer and drier than at other levels. T/RH at Site 13 failed yesterday
