

First soil sample

This taken during the initial installation hole at me01 on Monday about 4pm. (However, we aren't taking data at this site yet, so it doesn't really matter when it was.)

I didn't get around to weighing until just now (2 days later) so the Qsoil should be lower than the real value. However, again, we don't have measurements to compare to so this doesn't really matter. Nevertheless, it is useful to process this sample to get a bulk density measurement...

Tray (tare): 8.2g

Wet+ring+tray: 172.2g
