

ISS Setup 11 Dec 2016

ISS setup continues. Transported more sodar equipment to the farm site, cleared weeds at that site, and organized crates and the seatrainer. Eckhard Gast arrived from Metek in Germany and will begin setting up the sodar-RASS tomorrow. Gary worked on the DM computer, so now it is ingesting profiler and WXT data, plus webcam images. The profiler running well - seeing a little clutter from the wind turbine although NIMA is did a good job of filtering that in today's light winds. Winds consistently to 2km and often to 3km. Sunny with very light winds.
