

Perdigao setup part Duex

April 6th setup notes: Gary, Dan and I arrived late yesterday. Wednesday we rearranged the ops center and attempted to find all the sensors and equipment left in the beginning of Feb. with some success, and some failures (we can't seem to locate at least one Metek sonic, and the PTB 220 pressure sensors as of yet).

We set up station V06 this afternoon, but are missing a USB memory stick (forgot that stick was "borrowed" for another station back in Feb). Will attempt to bring that station up tomorrow.
