

setup notes april 16 / Easter

we set up TNW05 today (and yesterday)

all sonics below 20 m are pointing to the NW because of trees. Had to remove many limbs from a tree that was leaning into the tower just to be able to hang the booms.

lower DSM has wrong IP address, need to bring a laptop up to the site to remedy.

visited many sites yesterday to work on "to do" list, see Gary's posts from earlier today.
