

april 18th set up notes

instrumented TrNW06 today. last of the standing towers that I know of.

My apologies for redundant entries - I could not see my earlier posts for some reason, and wasn't sure if they had actually been posted.

Samortechnica was in the area today, working on ??? no idea where.

Enigi will be here tomorrow to install batteries and solar systems hopefully at TNw01, Va03, and TrSE 5?.

we will start replacing bad TRh's at multiple sites, and wearing down the "to do" list

already having people asking to borrow the truck and a driver to assist in various user deployments,

will help when I can, but our work must come first, and not sure how people will take that. Is NCAR running this circus or are we just another participant?
