Overview

The following tables were extracted from the http://www-pcmdi.llnl.gov/cmip/standard_output.html PCMDI IPCC standard Output requirements document dated 20 July 2004. Each table a column listing the CCSM atmosphere model history variables needed to generate the corresponding PCMDI field.

Monthly mean and time-independent data

<caption> <i>Monthly Mean Atmosphere + Land Surface 2-D (latitude, longitude) Data</i> </caption><tbody>

^aAlso known as "surface air temperature."
Distinguish from 3-D air temperature by specifying a size-one dimension of height with coordinate value 2 m, or by including the CF-convention "coordinates" attribute, containing the name of a scalar coordinate variable for height with the value of 2 m.
^bIn the upper 0.1 m only.
^cTotal for all soil layers.
^dNear-surface value.
Distinguish from 3-D distribution by specifying a size-one dimension of height with coordinate value 10 m (for near-surface wind) or 2 m (for near-surface humidity), or by including the CF-convention "coordinates" attribute, containing the name of a scalar coordinate variable for height with the value of 10 or 2 m.

<caption> <i>Time-independent Land Surface 2-D (latitude, longitude) Data</i> </caption><tbody>

10	mole_fraction_of_o3_in_air	O3	mol mol ⁻¹	tro3	1e-9 (i.e., ppbv)

Except for the variable cloud_area_fraction_in_atmosphere_layer, this data must be provided on pressure levels. The set of pressure levels must include at least the AMIP standard pressure levels (= NCEP reanalysis levels):
1000, 925, 850, 700, 600, 500, 400, 300, 250, 200, 150, 100, 70, 50, 30, 20, 10 hPa.
_Fraction of the time that a pressure surface lies below ground.

Daily mean and 3-hourly data

NOTE:
The following daily mean data may be provided for a smaller time period than the monthly means:

Daily Mean Atmosphere 2-D (latitude, longitude) Data

	CF Standard name	CAM name	CAM units	PCMDI name	Units
1	air_pressure_at_sea_level	PSL	Pa	psl	Pa
2	precipitation_flux	PRECC+PRECL) densityH20	m s ⁻¹	pr	kg m ⁻² s ⁻¹

13	northward_wind ^d	V lowest	W m ⁻²	vas	m s ⁻¹

^aAlso known as "surface air temperature."
Distinguish from 3-D air temperature by specifying a size-one dimension
of
height with coordinate value 2 m,
or by including the CF-convention
"coordinates" attribute, containing the name of a scalar
coordinate variable for height with the value of 2 m.
^bDaily minimum value. Designate by a cell_methods
attribute specifying "time: minimum within days,"
where "time" is the name of the time dimension.
^cDaily maximum value.
Designate by a cell_methods attribute specifying "time: maximum within
days,"
where "time" is the name of the time dimension.
^dNear-surface value.
Distinguish from 3-D distribution by specifying a size-one dimension of
height with coordinate value 10 m,
or by including the CF-convention "coordinates" attribute,
containing the name of a scalar coordinate variable for height
with the value of 10 m.
