

Daily status 4 June 2017

4 good soundings today at 00, 06, 12, and 18 UTC. Petra and Tyler from OU did the 06 sounding, thank you! It looks like for that sounding the balloon popped at ~170mb.

We were not getting data from the iss3 profiler for part of today but as of now Gary has fixed that.

Weather is clear and cooler, with wind from W/NW.
