

Daily Status 9 June

Weather: warm with thin cirrus and light winds at surface. Regular operations with soundings at 0, 6, 12, 18Z and extra launches at 15 and 21Z. A large group of locals (led by Jose Carlos and Anna) came to the 12Z sounding.

The 15Z and 18Z soundings both had problems. For the 15Z sounding, Tyler (OU) reported a bad temperature sensor, and for the 18Z sounding Kate reported some kind of data lockup at 700mb - both soundings were relaunched. Replaced desiccant in ground check unit after 2317Z sounding.

Isabel left this morning to return home - thanks very much Isabel (her first field project!).
