

Stage-1.7.8

Cleanup coupling layer

- Get SCAM to work.
- Move to Brian K., naming convention: `_mct` at end rather than beginning
- Create one module as suggested by Brian K.
- Add header and comments
- Make use of "use only" for modules (unless list is huge)
- Make `atm_init` just like other inits in comments
- Make sure `mct_atm_Export` isn't called from outside `atm_comp_mct`
- Add args and content to `_final` methods
- Remove `noland` in `lnd_comp_mct`, use `land_present` instead.
- Change names of `ocn_comp` to `camocn_comp`
- Give functionality of methods in public statements
- Move `seq_fields_mod` and `seq_fields_indices` in `lnd_comp_mct` to where needed
- Fix spelling mistakes
