

# s14 status

Today, the crew appears to have installed s14. From the data:

Ott: working, but for some reason data aren't being parsed by barolo. The first character seems to be 0x00, sometimes followed by 0xff, before the good message. Other Otts don't have this.

TRH: okay

P: okay

CSAT/EC150: okay

Gill 2D: okay

Rad: okay

Soils: okay

Victron: not reporting
